

Keeping your premises safe and your business compliant

About Fire Door Services...

The legislation around fire door safety is extensive and for good reason. The safety of your staff and premises is of the utmost importance but it is often something that is unknowingly compromised.

The 'Fire Door' is the first line of defence between you and the fire and plays a crucial role in restricting the spread of fire and smoke, thus reducing injury, property damage and death.

When you call upon the services of Fire Door Services (FDS), we will quickly establish if the products you have in place have been well maintained and that both you and your premises are fully compliant as well as safe.

Services...

Passive Fire Protection products are built into the fabric of a building and often go unnoticed. The aim of these products is to restrict the spread of fire and smoke by containing it to one area.

We specialise in Fire Doors but understand the complexity of fire compartment safety. Our service includes site inspections, product design and specification along with the installation and ultimate certification.

Our commitment to this specialised industry ensures that our services reflect changes in legislation. From arranging an external risk assessment through to maintaining your premises, we provide you with an effective, complete solution.

Keeping your premises safe and your business compliant

Inspections...

Based on a recent risk assessment or building conditions survey, our inspector will visit your premises and make recommendations to ensure compliance is achieved. This scope could be broadened to include 'Fire Compartments' and/or 'Escape Routes'.

Our inspection report will advise on the status, taking into account gaps, glazing and door hardware. It will also advise on the suitability of upgrading existing leaves as preferable to a full replacement.

The report will outline a set of recommendations, including essential works required to meet the current guidelines, as well as a list of non-critical but advisable works.

Design & Supply...

Our bespoke timber fire doors are available in any finish, design or size required - be it single or double action, we have a certified product to suit any opening. All doors are available in FD30 or FD60.

Should Steel Exit Doors or Steel Fire Doors be your preferred choice, we can supply and install a wide range of excellent quality products to your design and finish.

All doors and door sets are supplied to BS476:22 and installed in accordance with BS8214:2008.

Keeping your premises safe and your business compliant

Installation...

The installation of a fire door is a complex procedure requiring a detailed understanding of the role played by each individual component. It therefore needs to be installed by someone with the correct training and expertise.

As approved Q Mark Registered Fire Door Installers we ensure a certified and traceable process from manufacture to installation.

Upon completion of the work, you will receive full certification detailing that all work has been carried out according to the manufacturer's instructions and/or installed to BS8214:2008.

Maintenance...

Maintaining a fire door is crucial in its ability to perform to its design integrity.

Checks are due to a variety of factors, from general wear and tear of the door and hardware caused by continual use or the settlement of the surrounding structure which could cause distortion in a door set.

We can implement and carry out an agreed maintenance program on a recommended biannual basis that will produce a detailed comprehensive report including a schedule of works for further consideration.

Consultancy..

As professional and experienced consultants we have the knowledge to work with you to ensure compliance with current regulations/guidelines. Working within your policies we can prepare documents consisting of

- Scope of Works
- Materials & Workmanship
- Design
- Drawings
- Approvals

As your consultants we will ensure the smooth transition from tender to delivery. Whether you choose an existing supply base or a European tender (OJEC) solution, our assistance will make all the difference.

Keeping your premises safe and your business compliant
